Timetable Management System

> Made by Zamir Memon

What is this system?

A web-based tool that creates school timetables automatically. Instead of spending 2-3 days making a timetable by hand, this system does it in **10 seconds** — with zero conflicts.

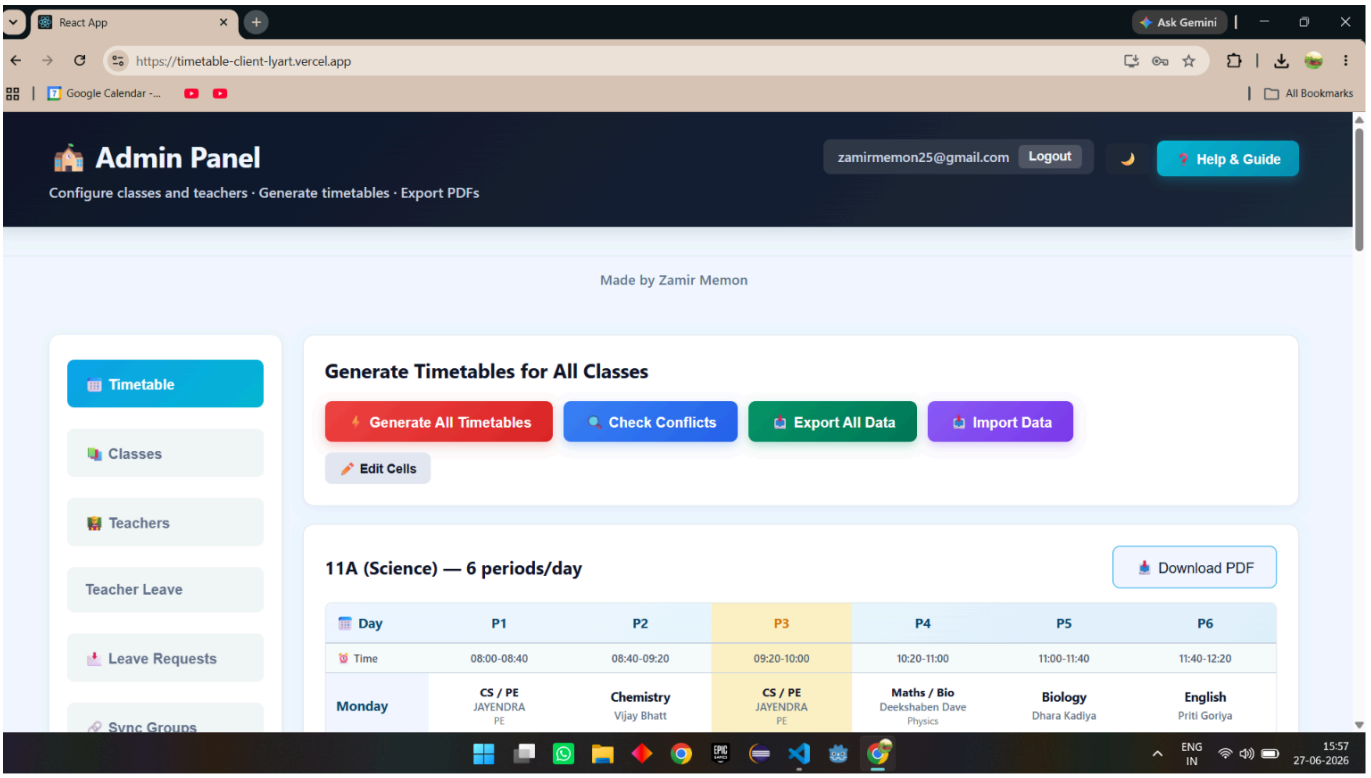

Who can use it?

Role	What they can do
Admin	Create teachers, classes, generate timetables, manage accounts
Teacher	View their own schedule, submit leave requests
Student	View their class timetable

1. Admin Panel Overview

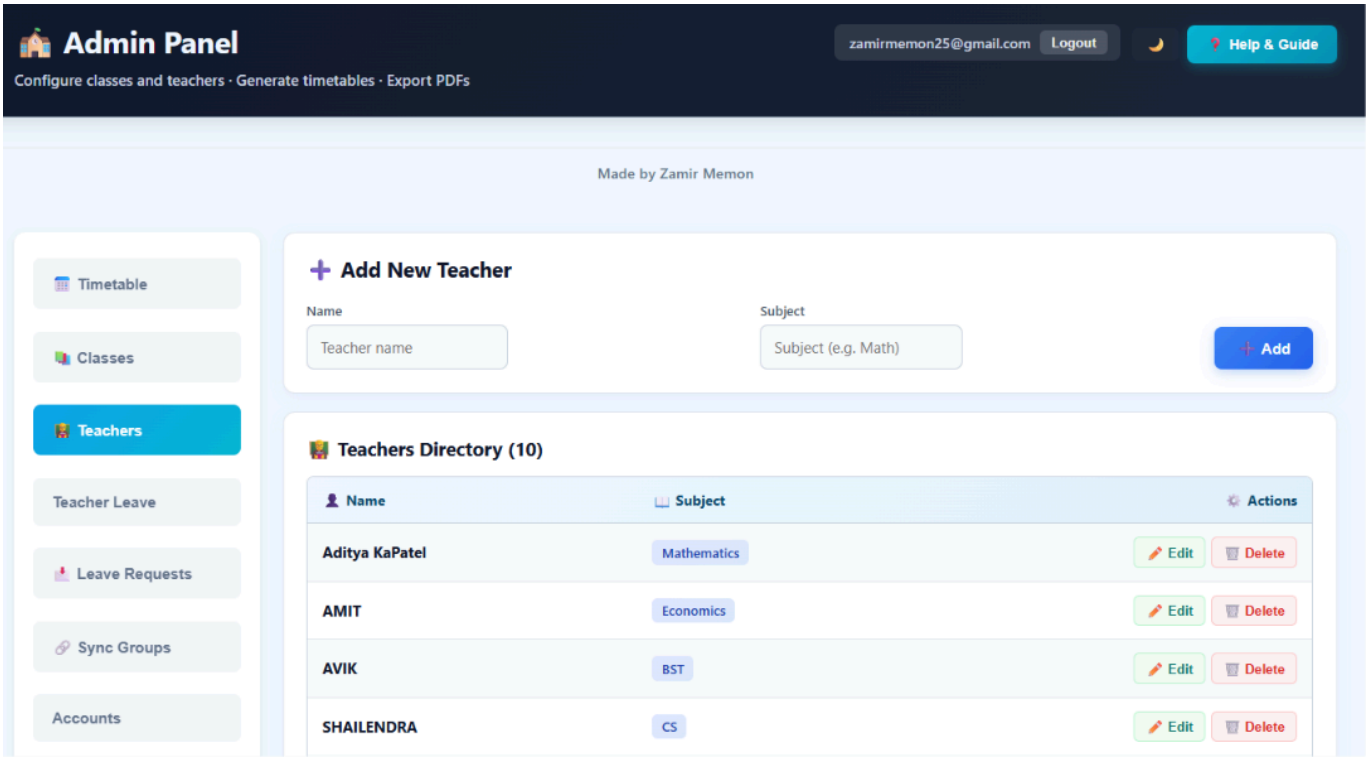

This is the main screen. From here, admins can access every feature:

- **Teachers** — add and manage teachers
- **Classes** — add classes and assign teachers
- **Timetable** — generate and view schedules
- **Sync Groups** — link elective groups across classes
- **Accounts** — create admin and teacher accounts

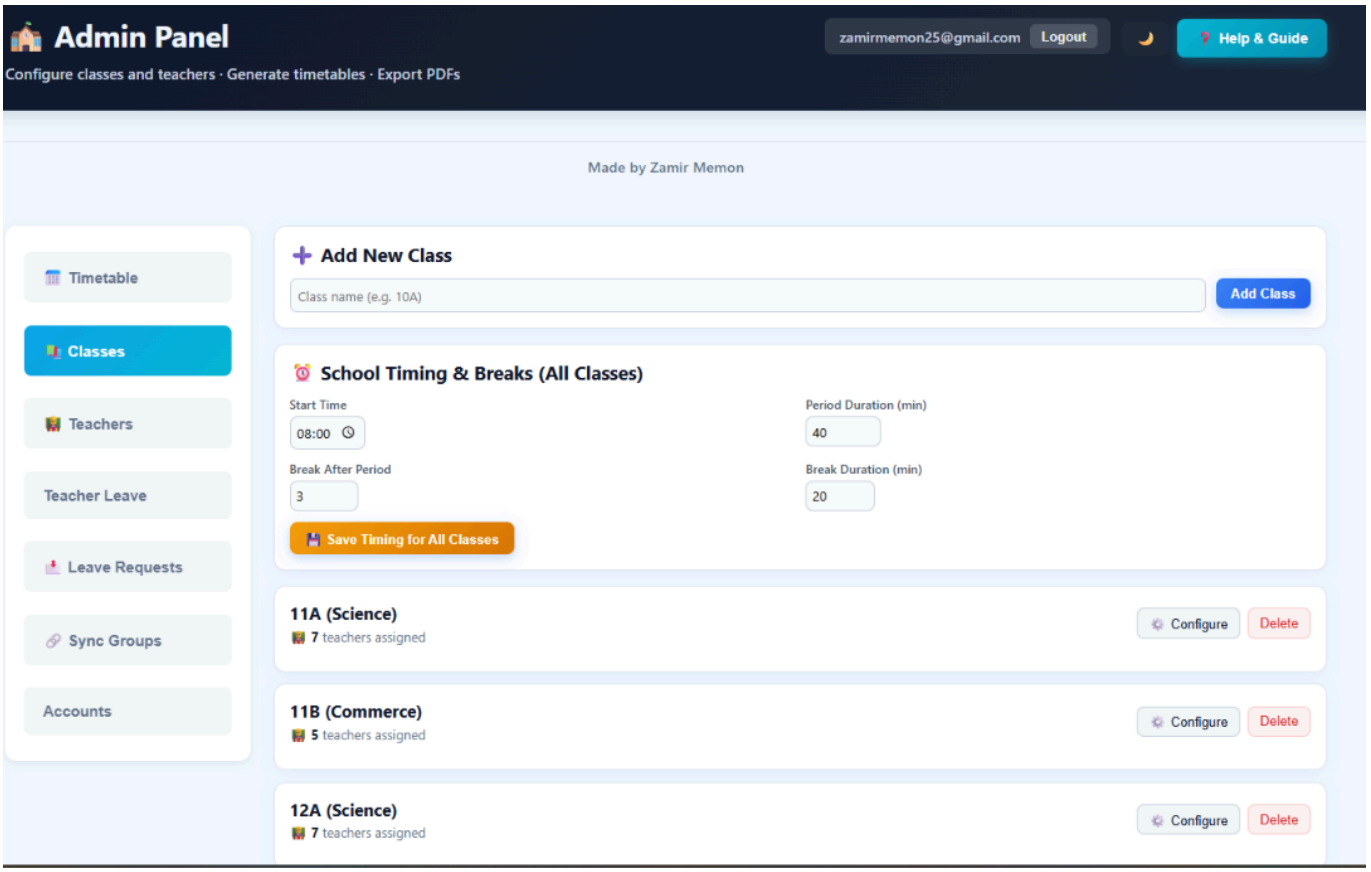

2. Teachers Tab

Add all teachers first. Just enter the name and subject, then click **Add**. Teachers can be edited or deleted anytime.

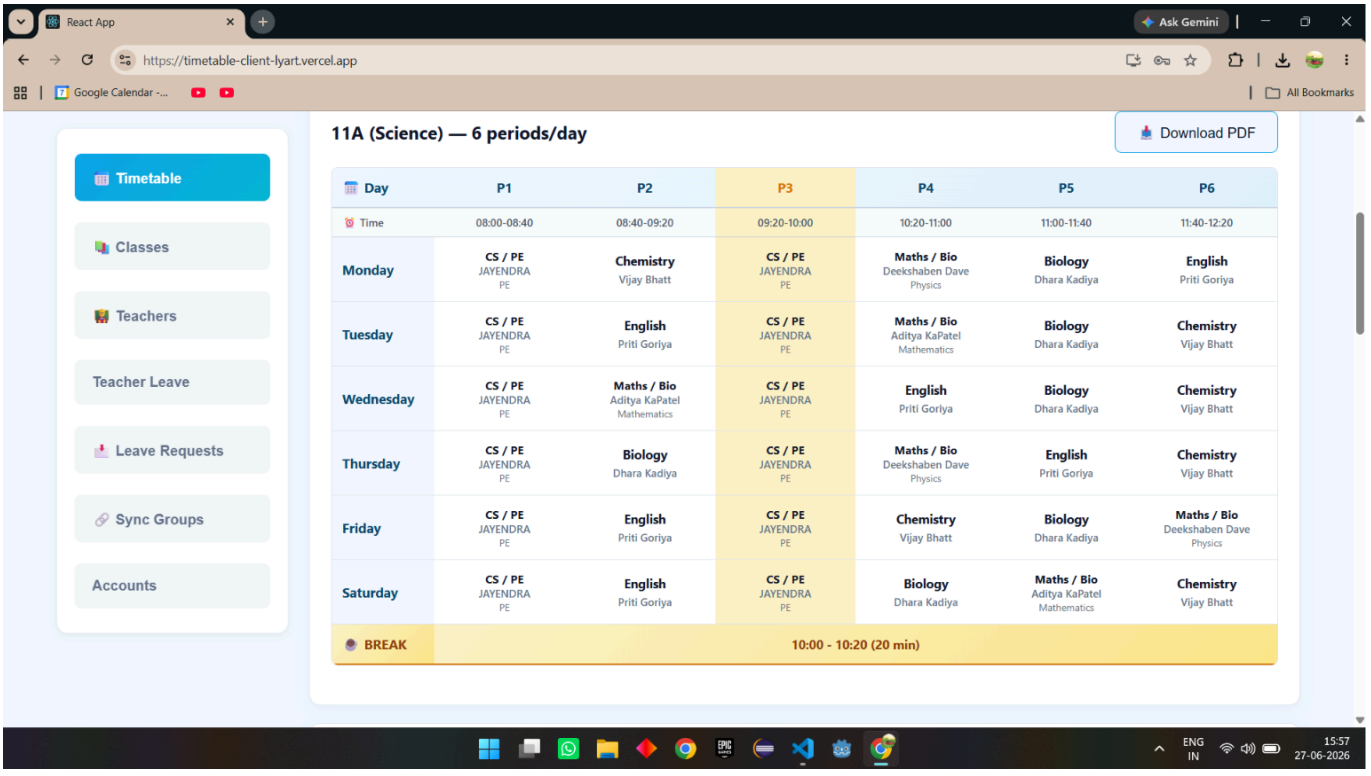

3. Classes Tab

Create a class (e.g. 11A), set the number of periods per day, and assign teachers. You can also group teachers who share the same slot — for example, if three teachers handle different electives at the same time.

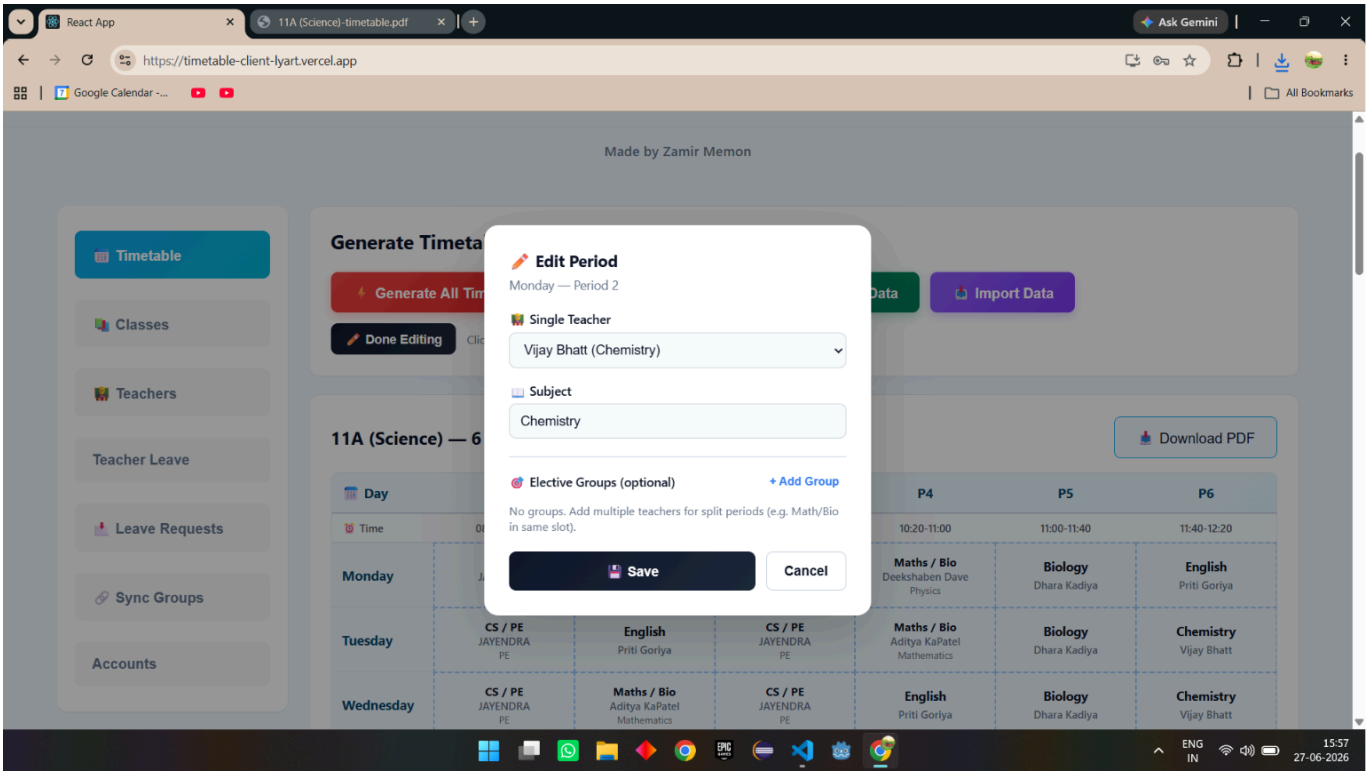

4. Generate Timetable

Click **Generate All Timetables** and the system creates a full weekly schedule for every class in seconds. No conflicts, no overlapping teachers.

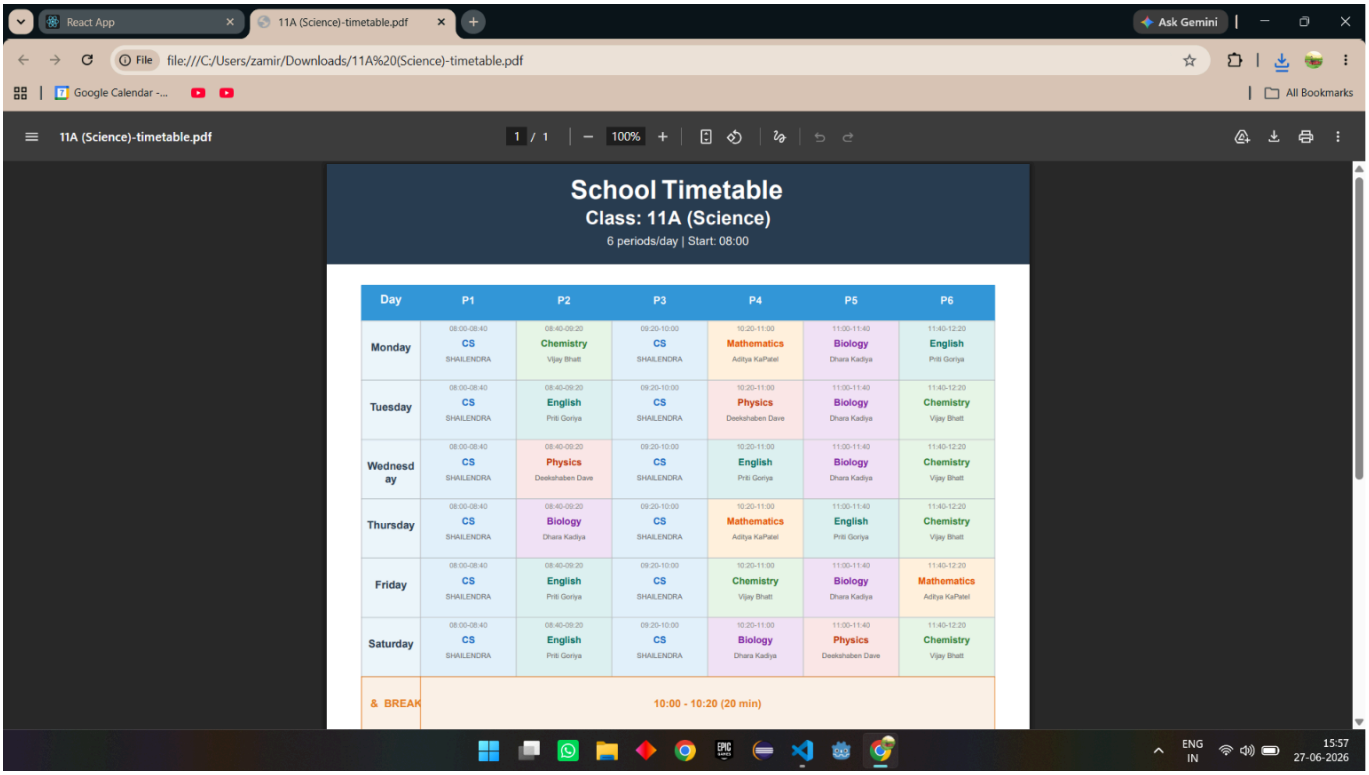

5. Edit Cells

Need to change a period? Toggle 🖍️ **Edit Cells** and click any cell. A popup lets you change the teacher, subject, or add elective groups.

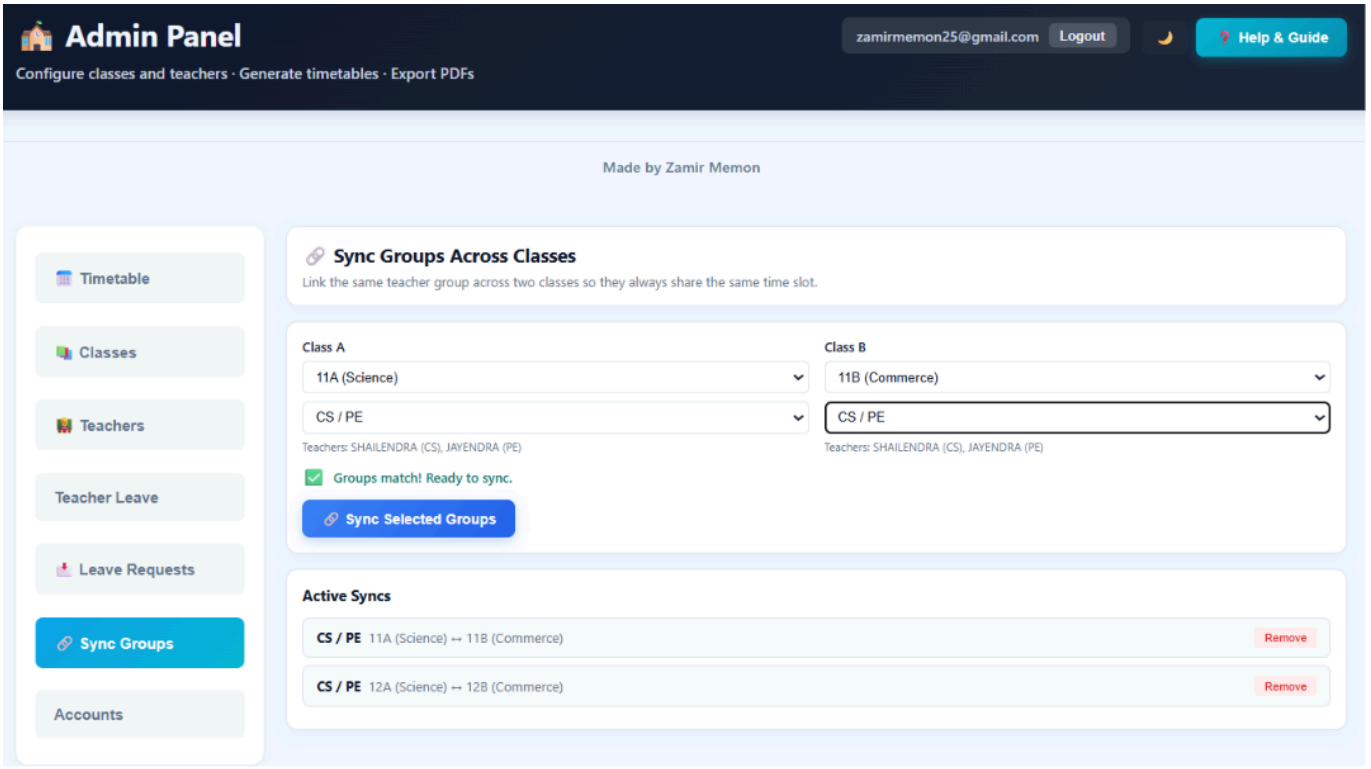

6. Download PDF

Any class timetable can be downloaded as a printable PDF file. Useful for printing and putting on staff room notice boards.

7. Sync Groups

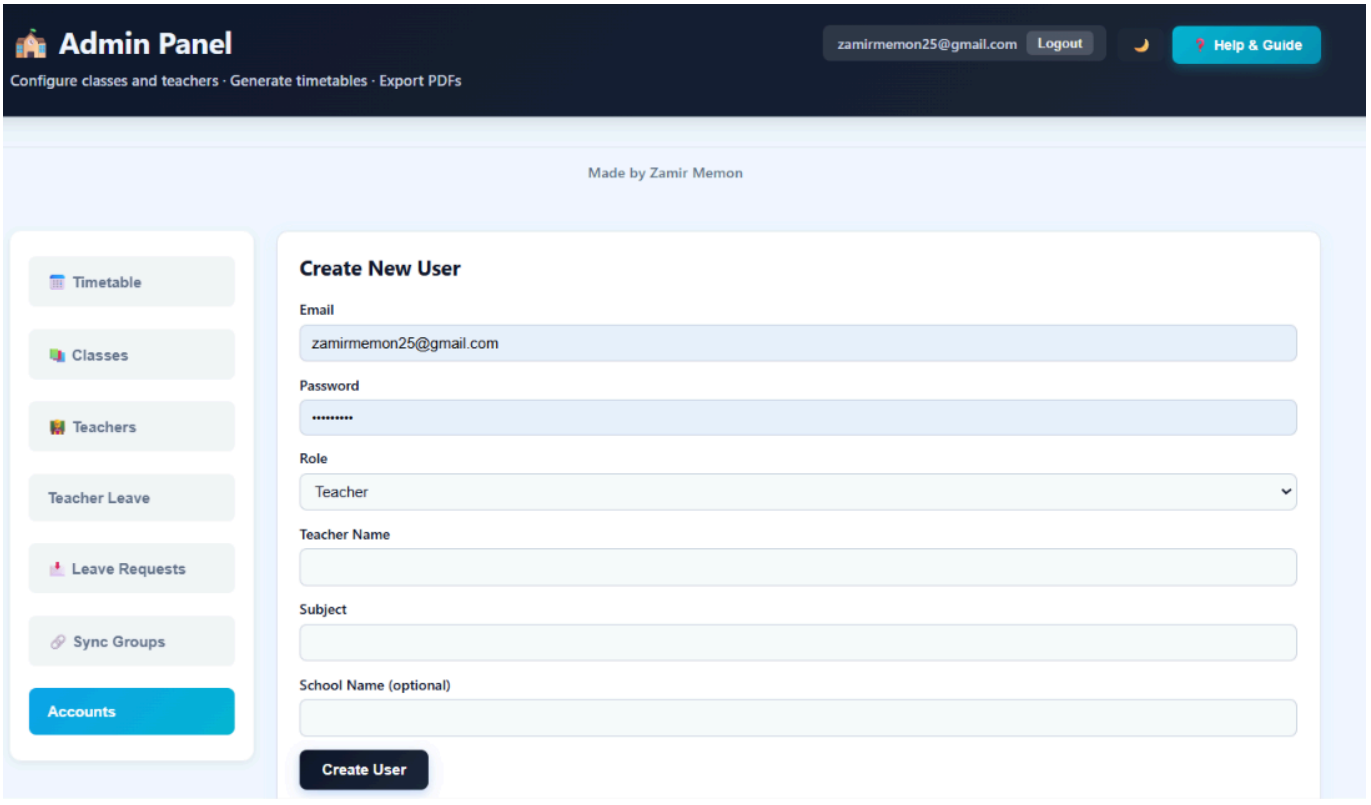

If two classes share the same elective subject (e.g. Physical Education), you can **sync** them so they appear at the same day and period. This prevents room scheduling issues.

---

8. Accounts — Create

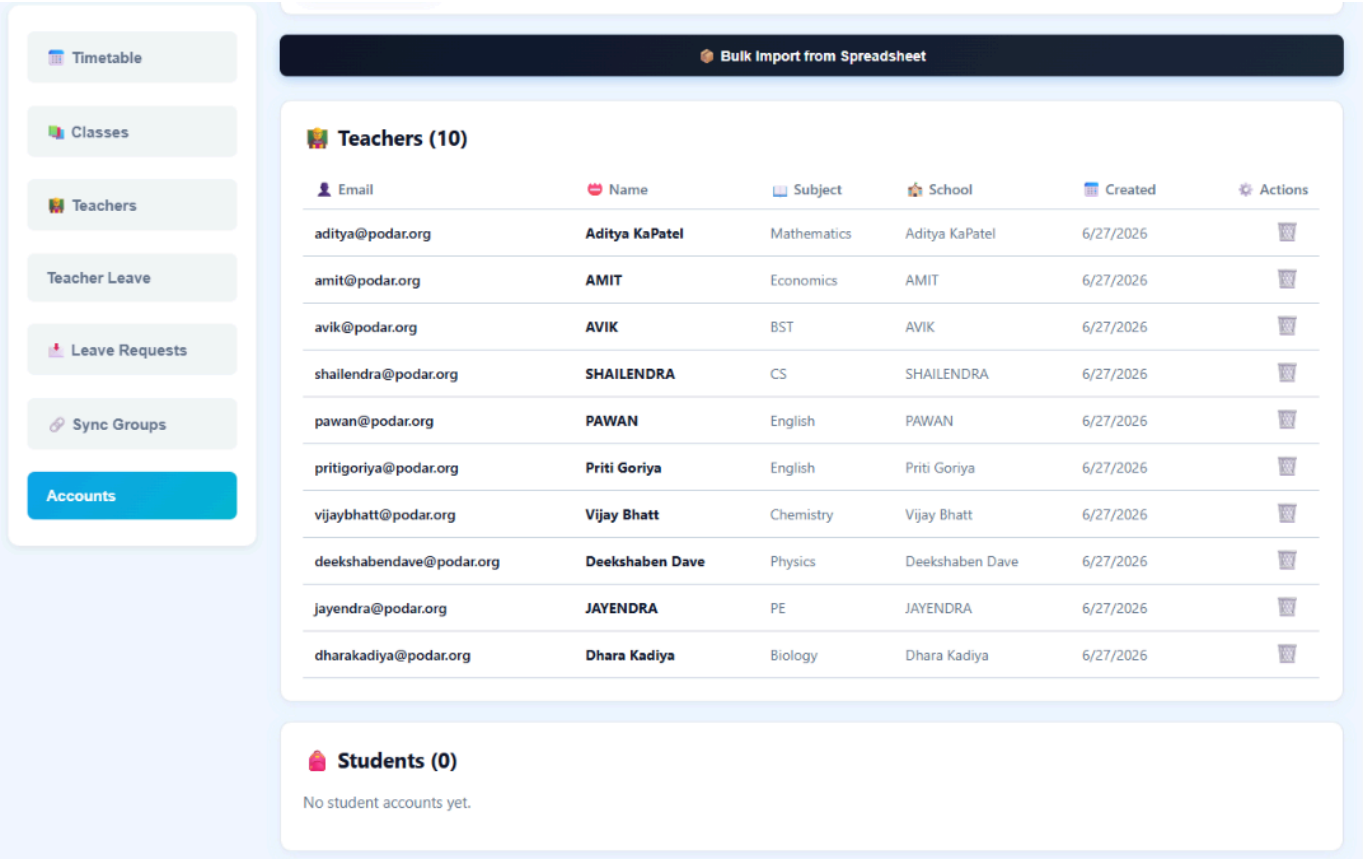

Create accounts for teachers and other admins. Each account gets an email and password that the teacher can use to log in and see their own schedule.

---

9. Accounts — List

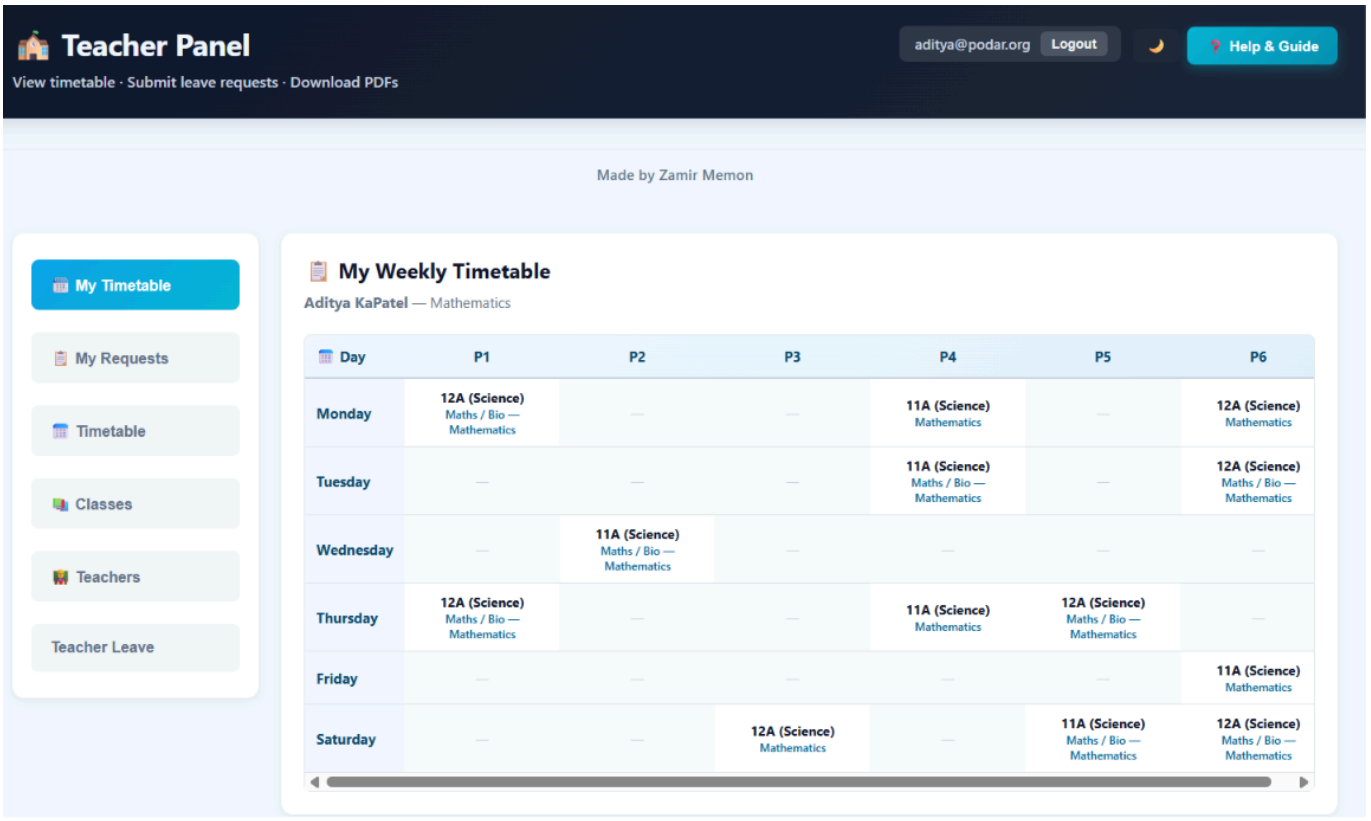

View all user accounts in one place. You can delete accounts if needed.

---

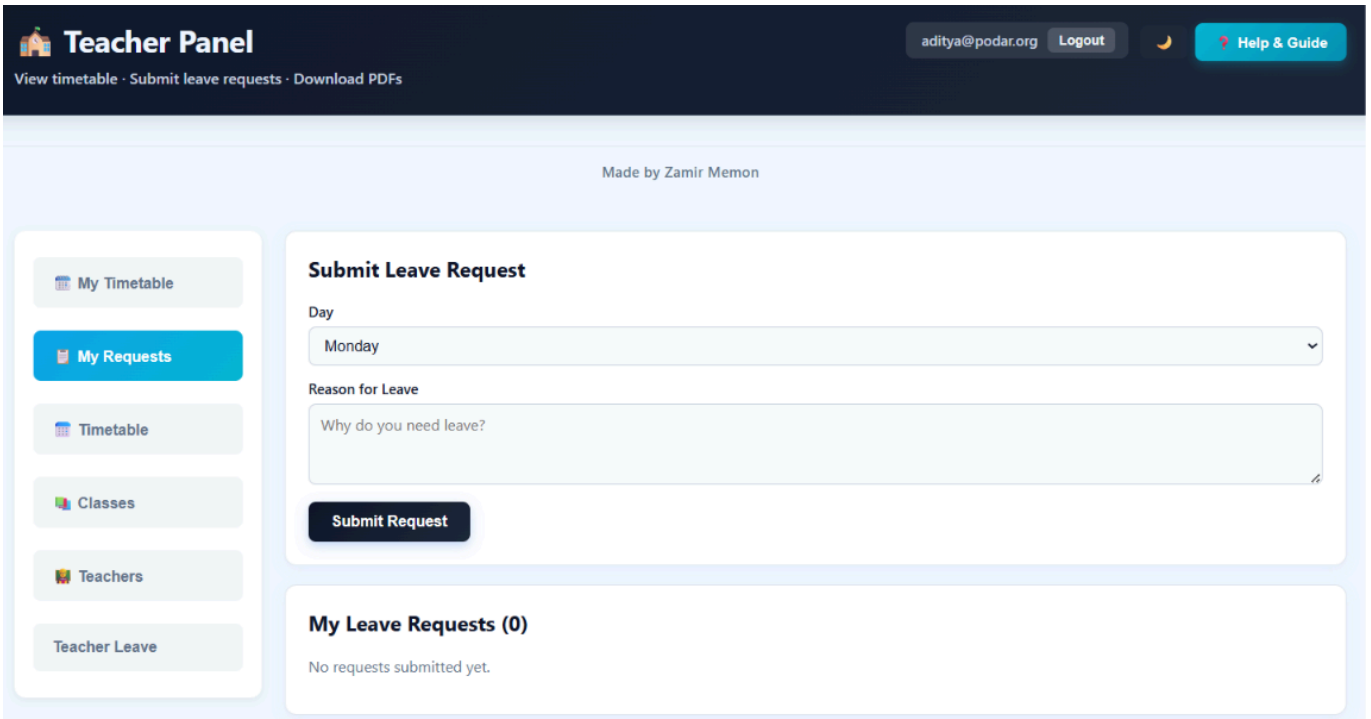

10. Teacher Panel — My Timetable

When a teacher logs in, they see **only their own schedule** — which class, which subject, and which period. Nothing else, no confusion.

11. Teacher Panel — Leave Request

Teachers can submit a leave request by selecting a day and writing a reason. The admin reviews and approves or rejects it.

Quick Summary

Feature	What it does
Auto-generate timetable	10 seconds instead of 2-3 days
Edit cells	Change any period with one click
Export to PDF	Print-ready schedules
Export to Excel	All data in one spreadsheet
Teacher groups	Elective teachers share the same slot
Cross-class sync	Same subject, same time across classes
Teacher panel	Each teacher sees only their schedule
Leave requests	Teachers apply, admin approves
